This is the 5' sequence of the clone insert
Cione from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKTZ); Email S.wiemann@cKtz- heidelberg.de;
sequenced by Qiagen (Hilden/Germany) within the CDNA sequencing
consortium of the German Genome Project.
No Si sequence available:
This clone (DKTZp686N12109) is available at the RZPD in Berlin.

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruiffly.org The BDGP Drosophila melanogaster BAC library was prepared by KaZutoyo Googawa and Maron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalc, NY. The Library is named RPCI'S9 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on by Sp. the same strain used for the BDGP's Pl and ESI libraries. A more detailed description of the library

Determination of this BAC-and sequence was carried out as part of

collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila

melanogaster genome using these BACs. For further information

please see http://www.fruitfly.org The BDGP Drosophila

melanogaster BAC library was prepared by Kazutory Oscogawa and

Aaron Mammoser in Pieter de Jong's laboratory in the Department of

Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,

NY. The library is named RRCI-98 and was constructed by partial

ECORI digestion of Drosophila DNA provided by the BDGP's

Pl and EST libraries. A more detailed description of the library

and how to order individual BAC clones, the entire library or

filters for hybridization from the BACPAC Resource Center can be

found at http://wardec.med.buffalo.edu/drosophila_bac.htm.

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs por further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Picter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial BCORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2: on bw sp, the same strain used for the BDGP's 21 and EST libraries. A more detailed description of the library and how to order individual Back clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Cosegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Castlitte in Buffalo, Nr. The library is named RPCI-98 and was constructed by partial Ecoki digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2: or bw sp. the same strain used for the BDGP's Pl and BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACAC Resource Center can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Drosophila melanogaster genome survey sequence TST3 end of BAC # BACR19016 of RPCI-98 library from Drosophila melanogaster (fruit fly), genomic survey sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley prosophila Genome Project (3DGP). The BOGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BOGP Drosophila Maron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Rowell Park Cancer Institute in Buffalo, NY. The library is named RPCI 98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BOGP from the isogenic strain v2. on bw sp, the same strain used for the BOGP's pl and EXI libraries. A more detailed description of the library and how to cider individual BAC ciones, the entire library or filters for hybridization from the BACPAC Resource Center can be contain at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Googawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer of Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is mamed RPCI-99 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic Strain y2: on bw sp, the same strain used for the BDGP's Pland EST libraries. A more detailed description of the library and now to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be for a feature of the strain which the BACPAC Resource Center can be for the BACPAC Resource Center can be for the partial broads.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton pBelobacii.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Genoscope.

The library is named Rossell Park Cancer Institute in Buffalo, BOSORI digestion of Drosophila DNA provided by the BDGP from the Isogenic Strain y2; cn bw sp, the same strain used for the BDGP's pl and SST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997) http://ftp.genome.washington.edu/RM/RepeatMasker.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Jow-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Web site: http://www-seq.wi.mit.edu

humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
on Jan 15, 2002 this sequence version replaced gi:18121468.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (1.e., phred quality) as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Mil subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em., EMBL; Sw., SWISSPROT, TF., TREMBL; Wp., WORMPEP, Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                      http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr9
RPI1-217B7 is from the library RPCI-11.1 constructed by the group of Pleter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   misc_feature

RPI1-21757 It may be shorter because we sequence overlapping sections only once, except for a short overlap.

The true right end of clone RPI1-21757 is at 96717 in this sequence. The true left end of clone RPI1-122FIC is at 72980 in this sequence. The true right end of clone RPI1-122FIC is at 72980 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: This is a 'working draft' sequence. It currently consists of 39 contigs. The true order of the pieces is not known and their order in this sequence record is
